

Rackspace

If you prefer to purchase and configure your own hardware but are unable to host a server(s) at your location in a secure controlled environment we can help there too. With our building security cleared by both the Metropolitan and Surrey Police you can be sure your server(s) is in a safe environment. We operate redundant air conditioning and have an on-site generator capable of keeping your server(s) cool and powered up.

We appreciate that not every customer needs every service, and therefore we have a range of options available. Whether you require a single server, multiple dedicated racks or something in between, we are happy to provide a tailored quote for your business.

Some of the options we can provide within our secure, climate-controlled Data Centre, on top of our redundant Air-Conditioning, UPS and backup generator are:

- BIOS level access to your server
- Control power to your server at the power socket
- Dedicated physically secure rack space

- The use of CC Evaluation Assurance Level 4+ (EAL 4+) firewalls
- Bespoke monitoring of your server(s)
