

## Security

We here at DMGi pride ourselves on security, after all your data matters not only to you but to us. Security over the last few years has become paramount with more and more sensitive data being stored on desktops, laptops, PDAs, USB memory sticks and more. DMGi can help you define your security policy, audit your network for security breaches, virus infestations and lock down your systems for the future.

DMGi has designed internet security solutions for small home offices right the way up to 3 tier systems audited and approved by both the Metropolitan and Surrey Police.

We can provide security for you in house and on the road (see our new Chrome warrior package) for complete peace of mind.
