

ISP Services :: Database Hosting

DMGi can provide database hosting for your web-site on either Microsoft's SQL Server platform or MySQL AB's MySQL platform. We will provide you with two user logins for your database, one with full access rights for you to administer the database with, and the other with restricted rights suitable for accessing the database from the web-site itself.

Our Standard Web Hosting package includes a single database on request, and any space used for the database will be added to your web-hosting for billing purposes.

If you require database hosting without a web-site, or a configuration that is not covered by the above, please call DMGi sales on 01483 407 884 to discuss your requirement with us.
