

Chrome :: Details :: On-Site Network Maintenance

Chrome Lite
Chrome Active Chrome Managed

The main core of our service offering, found in our Chrome Managed package. On-Site Network Maintenance provides you with a dedicated systems engineer for a minimum of one half-day at your site each month. The frequency of visits is determined by the size of your network and budget.

Each visit is designed to offer you a proactive service, including a scheduled list of maintenance activities that are undertaken by our engineer to provide a stable network. After these activities have been completed, our engineer will be available to assist with project work and consultancy.
